SUMMARY

Computer Science Engineering (Data Science) student with hands-on experience in Python, SQL, data analysis, machine learning and backend development. Experienced in building data-driven applications, machine learning solutions, REST APIs and interactive dashboards using Pandas, NumPy, Scikit-learn, FastAPI, Django and Streamlit. Familiar with AI, NLP, Generative AI and prompt engineering, along with MLOps tools including Docker, MLflow and AWS S3.

EDUCATION

Alva's Institute of Engineering and Technology 2023 – 2027
B.E. Computer Science and Engineering (Data Science) **CGPA: 7.3**
Vidyanikethana PU College 2021 – 2023
Pre-University Education **77.81%**
Lourdes Hill Convent 2021
Secondary Education **60.80%**

TECHNICAL SKILLS

Programming & Database: Python, SQL, C++, SQLite
Data Analysis & Machine Learning: Pandas, NumPy, Scikit-learn, EDA, NLP, Predictive Modeling, Classification
AI & Generative AI: Artificial Intelligence, Generative AI, Prompt Engineering
Data Visualization: Streamlit, Plotly, Data Visualization, Interactive Dashboards
Backend & Web: FastAPI, Django, Flask, Pydantic, REST APIs, HTML, CSS
MLOps & Cloud: Docker, MLflow
Tools: Git, GitHub, VS Code

PROJECTS

CodeTrends Dashboard *Python, Pandas, NumPy, Streamlit, Plotly*

- Built an interactive analytics dashboard to study programming language popularity, demand, growth and ecosystem trends.
- Used Pandas and NumPy for structured data processing, exploratory data analysis and comparative trend analysis across programming languages.
- Created interactive Bar, Line, Area, Heatmap and Radar visualizations using Plotly to communicate analytical insights.

Sentiment Analysis & Review Intelligence API *Python, FastAPI, Scikit-learn, Docker, MLflow, AWS S3*

- Developed a containerized REST API for classifying reviews into positive, negative and neutral sentiment using NLP and machine learning.
- Implemented TF-IDF feature extraction with Logistic Regression and generated prediction confidence scores for review classification.
- Built single-review and batch prediction endpoints with Pydantic validation and interactive Swagger API documentation.
- Used MLflow for experiment and model tracking and AWS S3 for cloud-based application logging with local fallback storage.

FitCheck – Healthcare Monitoring & Disease Prediction System *Python, Scikit-learn, Pandas, NumPy, HTML, CSS, JavaScript*

- Developed a data-driven web application for processing health-related input metrics and predicting health risk indicators using machine learning.
- Applied data preprocessing and classification techniques using Pandas, NumPy and Scikit-learn to build the prediction workflow.
- Created a web interface using HTML, CSS and JavaScript for collecting user inputs and presenting prediction results.

CERTIFICATIONS & ACTIVITIES

- **NPTEL:** Python for Data Science
- **NPTEL:** Programming in Modern C++
- **Google Cloud Career Launchpad**
- **Team Leader – Gemini Prompt-A-Thon, VIT Chennai:** Participated in a Google Gemini focused AI/ML hackathon and worked on a solution using Generative AI and prompt engineering.
